**Abatement Technologies Introduces New
HEPA-CARE Air Purification System.**

Suwanee, GA. Abatement Technologies has announced the release of two new portable air purification systems for the isolation of infectious patients in healthcare facilities. The new HC600F and HC600F-UV are excellent additions to Abatement’s successful line of HEPA-CARE® air purification systems.

The economical HC600F typically provides 12 air changes per hour (ACH) in rooms as large as 2,500 cubic feet. The performance of the HC600F-UV model is the same, but this model also has a germicidal UV lamp built into the HEPA filter, to kill airborne bacteria and help neutralize unpleasant odors.

Dave Willyard, Vice President of Sales for Abatement Technologies, said: “The HC600F and HC600F-UV models are perfect for facilities that want high-quality systems, but don’t need the higher airflow of our 800 series models.”

Abatement Technologies, Inc. is an industry leader in the manufacture of technologically advanced air filtration equipment, with systems in use in more than 4,000 healthcare facilities in the U.S. and Canada.

For more information on the HC600F and HC600F-UV, call at 800-634-9091, or visit www.hepacare.com.
