### NEW, EXPANDED HEADQUARTERS FOR ABATEMENT TECHNOLOGIES IN SUWANEE, GEORGIA

Suwanee, GA, November, 2005: Abatement Technologies is proud to announce the move to its new expanded corporate headquarters in Suwanee, Georgia.

According to David Shagott, president of Abatement Technologies, "We have more than doubled our warehouse space, which makes it even easier to meet our objective of shipping 98% of client orders within 24 hours."

All operations moved to the new location in August, 2005. The facility, offices and warehouse space were custom-designed to the company's specifications. "We wanted to provide a more productive working environment for our employees, while allocating ample room for future growth," explained David Shagott.

Shagott continues, "The additional warehousing space has already proven its value by enabling us to better deal with the enormous demand for our HEPA-AIRE Portable Air Scrubbers and Negative Air Machines caused by hurricanes Katrina, Rita and Wilma." These products are used by Cleaning & Restoration and Mold Remediation specialists in the cleanup and mold abatement process.

Abatement's new headquarters is conveniently located near a major Interstate with direct access to Hartsfield-Jackson International Airport.
