

# AIRE GUARDIAN<sup>®</sup> TRANSITION MODULE:

**Create a transition space for efficient passage of workers & equipment between clean areas and enclosed work areas.**

The AIRE GUARDIAN AG3100TM Transition Module from Abatement Technologies<sup>®</sup> is an easy-to-use, easy-to-set-up transition barrier that helps prevent potentially harmful dust or damaging particles from escaping an enclosed work zone. Placing an AIRE GUARDIAN TM at the ingress/egress location of the construction area can help control the migration of airborne contaminants into other areas of the facility that could negatively impact the health of building occupants or the integrity of sensitive products, equipment or processes; and reduces job cleanup time.

## **Zippered Ingress and Egress Doors**

Durable, zippered ingress and egress doors at both ends of the unit provide rapid movement of personnel and equipment through the transition module. The rugged AIRE GUARDIAN TM is built with ample space to handle the toughest work demands in a professional contractor environment. The unit can be used as a clothes change area for workers coming into or leaving the work zone or a space where equipment can be cleaned or decontaminated before moving back into a clean area.

## **Sets Up in Minutes**

The AG3100TM is a highly mobile unit that a single worker can set-up in minutes. Simply wheel it to the installation area, remove it from the mobile cart, place it in the doorway and seal it around the entrance to create an airtight enclosure.

## **Other unique features of the AIRE GUARDIAN TM include:**

- **Perimeter flanges for tape-sealing around the work area entrance**
- **Ultra-tough PVC enclosure fabric with large view windows**
- **Can be used as a clothes change or personnel/equipment cleaning area**
- **Cleanable & reusable for multiple job sites**
- **Enclosure fabric complies with UL flammability standards**
- **Lightweight aluminum frame with locking casters**
- **Transport cart with a 900 lb. load rating**
