Abatement Technologies Introduces New Portable Anteroom for Infectious Disease Surge Capacity.

Suwanee, GA. Abatement Technologies has announced the availability of a new portable anteroom for infectious disease control in healthcare facilities. The new Ante Up™ inflatable anteroom-module offers a temporary emergency option when patient-isolation requirements exceed the available number of anteroom-equipped rooms.

The new portable Ante Up may be especially appropriate for facilities concerned about the possible need to add surge capacity in response to a bioterrorism event or a pandemic. It can be used in combination with the company's HEPA-CARE® in-room HEPA filtration systems to help minimize any possibility that highly infectious biological pathogens can migrate into other areas of the facility.

"No one knows when and where a biological attack or pandemic may hit. The key is to be ready for anything and our new Ante Up module can help hospitals and other facilities prepare for what some experts say may be inevitable," stated David Shagott, president of Abatement Technologies.

Abatement Technologies, Inc. is an industry leader in the manufacture of technologically advanced air filtration equipment, with systems in use in more than 4,000 healthcare facilities in the U.S. and Canada.
