PRODUCTS FROM ABATEMENT TECHNOLOGIES ASSIST IN HURRICANE CLEANUP AND REBUILDING EFFORTS

Suwanee, GA, November, 2005: The devastation caused by hurricanes Katrina, Rita and Wilma has disrupted the lives of hundreds of thousands of Gulf Coast & Florida residents and left countless businesses destroyed or in disarray. In the wake of these hurricanes lies another devastating force. The culprit? Mold.

The presence of mold in homes, businesses, schools and offices is forcing owners to do extensive mold remediation and cleanup & restoration projects. Mold and other airborne particles released during cleanup work can cause allergic reactions and even worse, be toxic to humans depending upon exposure level, age and health of the person.

Abatement Technologies has shipped thousands of HEPA-AIRE Portable Air Scrubbers and Negative Air Machines into the affected areas where they are being used by Cleaning & Restoration and Mold Remediation specialists in the cleanup and mold abatement process. These companies and Abatement's products are playing a key role in helping to protect citizens and workers from dangerous airborne pathogens released into the air during remediation and cleanup activities.

Abatement Technologies is committed to meeting the needs of contractors and remediation specialists working on these projects during this difficult rebuilding period. Fulfilling product demand is a top priority.

For more information on the complete line of Abatement HEPA-AIRE Portable Air Scrubbers and Negative Air Machines, [click here](#).
