Abatement Technologies Introduces New Predator® Portable Air Scrubbers.

Suwanee, GA. Abatement Technologies has introduced three new Predator series portable air scrubber models, featuring virtually indestructible, rotational-molded plastic cabinets. All three models feature exceptional mobility, and multiple stages of filtration, including a true 99.97% efficiency HEPA filter.

The 70-pound Predator 1200 and Predator 1200-UV models have built-in dollies. When running at their peak airflow capacities of 900 to 1,000cfm. These upright units can typically provide 6 air changes per hour in areas as large as 9,000 to 10,000 cubic feet.

The 34-pound Mini Predator 600 model is smaller and more than 10-pounds lighter than any other unit, so it can be easily hand carried. At its peak airflow output of 600cfm, this unit can provide 6 air changes in areas as large as 6,000 cubic feet.

All 3 Predator models are certified to meet UL and CSA electrical safety and flame-resistance standards by Intertek Testing Services, a Nationally Recognized Testing Laboratory.

“Predator scrubber units are a great investment for any construction, renovation, demolition, water damage, fire, or mold remediation project” said David Willyard, VP of Sales for Abatement Technologies. “They are built to last for many years and to save contractors a lot of time and money.”

For more information contact Abatement Technologies by phone at 800.634.9091, or visit the company’s website, www.abatement.com.
